

Morphologische Untersuchungen Auf Dem Gebiete Der Indogermanischen Sprachen (1)

Filesize: 4.47 MB

Reviews

Great e book and beneficial one. It is amongst the most awesome pdf i actually have read through. You wont feel monotony at at any time of your own time (that's what catalogs are for relating to if you request me).

(Dorothy Daugherty)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 180 pages. Original publisher: Washington, DC: Division of Engineering Technology, Office of Nuclear Regulatory Research, U. S. Nuclear Regulatory Commission, 2005. OCLC Number: (OCoLC)243703731 Subject: Pressurized water reactors -- Loss of coolant -- By-products. Excerpt: . . . In a previous study (Appendix C), thermodynamic simulations were used to identify critical variables from a large number of components present during and subsequent to a LOCA event in the containment system. Computational thermodynamics simulation calculations were conducted using Environmental Simulation Program Version 6. 6 (OLI Systems, Inc. , 2002a) and StreamAnalyzer Version 1. 2 (OLI Systems, Inc. , 2002b). In the study, chemical speciation of plausible reaction products in sump water after a representative LOCA event was modeled to (i) determine the need for a pressurized test loop and (ii) assess whether gelatinous products could form in the typical time-temperature-pressure-chemistry-pH regime following a LOCA event. The corrosion rates were based on conservative values between pH 7 and pH 10 in borated water, selected from the values published in the literature. The sensitivity analysis was conducted over a wide range of amounts of each component to evaluate the effects of temperature on speciation because the temperature-dependent data were not available in most cases. The study indicated a strong influence of pH and temperature on the formation of the dominant solid phases in the simulated containment water. In alkaline solutions at pH 10, potentially amorphous silicates such as NaAlSi O, Ca Fe Si O, and Fe Si O (OH) were 3 8 3 2 3 12 3 4 10 2 predicted as dominant corrosion products. The formation of gelatinous material in alkaline solutions at pH 10 was inferred from...
