The publication is fantastic and great. It can be rally exciting throgh reading period of time. I am just very happy to inform you that this is the greatest publication i actually have read in my very own daily life and could be he very best ebook for at any time.

Narosa Publishing House, 2013. Softcover. Book Condition: New. 5th or later edition. Though Analytical and/or Experimental solutions for every problem are not possible, approximate solutions are. Numerical methods provide the best approximation among all. This book presents a host of numerical methods, their algorithmic presentation and computer programs in Visual Basic, FORTRAN and C++. Perhaps it is for the first time that any book provides numerical methods in Visual Basic. The text is exhaustive and illuminates basic derivations of the formulae to be converted into programs. For each program algorithm is expressed and each step of the algorithm can be directly converted into computer program statement. All topics in the book are explicit in nature, self explanatory and student friendly. Solved problems accelerate the grasp of the particular numerical method. This book can be used both as a text and a good reference book for any researcher who needs numerical evaluations his work. The reader is expected to have only elementary knowledge of differentiation and integration. Key Features Discussion of every method with theory, error estimation, steps of the method, algorithm Large number of solved examples and unsolved problems along with answers for practice Programs in Visual Basic, FORTRAN and C++ for almost every method Correspondence maintained among algorithms, programs in three languages and solved examples Includes general structure of high level programming languages Table of Contents Preface / List of Programs / Numerical Method, Error and Algorithm / Numerical Solutions of Transcendental Equations / Elimination Methods for Solving Simultaneous Equations / Solutions of Simultaneous Equations Iterative Methods / Solutions of Eigen-Equations / Interpolation / Least Square Curve Fitting / Numerical Differentiation / Numerical Integration / Solutions of Ordinary Differential Equations / Numerical Solutions of Partial Differential Equations / Optimization / Appendix A ? Monte Carlo Methods / Appendix B...
